Project Details

Project Title: LiteHR – Lightweight HR & Attendance Management System
Tech Stack: ReactJS, ExpressJS, JavaScript, SQL, NodeJS

Project Objective

To build a lightweight, secure, and efficient Human Resource & Attendance Management System tailored for small organizations — ensuring ease of use, low resource consumption, and cost-effectiveness without the complexity of full enterprise HR platforms.

Weekly Progress Report

Week Number	Week's Reporting Period	Report Submitted On
10	2/2/2026 – 7/2/2026	7/1/2026

Weekly Summary

During **Week 10**, the primary focus was on **final project presentation activities** and initiating planning for **new functional enhancements** beyond the core HR modules. The final presentation of the LiteHR project was successfully completed, showcasing the system's features, workflows, and overall architecture.

In parallel, initial work was carried out on designing a **Jobseeker module workflow**, which is planned as an extension to the system. The jobseeker flow was carefully mapped to allow users to browse available job openings, view detailed job descriptions, and upload their CVs for consideration.

Additionally, time was allocated to **brainstorming and shortlisting a new project idea** for upcoming development work. This week focused more on **workflow design and planning**, ensuring that future development can proceed smoothly.

Progress Achieved

The system now includes:

- Completed final project presentation
- Clearly defined Jobseeker workflow for recruitment

- Structured flow for job browsing, job details, and CV submission
- Initial planning for future project development

Tasks Completed

Final Project Presentation

- Completed and delivered the final project presentation
- Explained system architecture, modules, and workflows
- Demonstrated Admin, Manager, and Employee functionalities

Jobseeker Workflow Design

- Designed workflow for jobseekers to view available job listings
- Created flow for opening job details and understanding role requirements
- Designed CV upload and submission flow from the jobseeker side
- Mapped simple and intuitive navigation steps for the complete jobseeker journey

Future Project Planning

- Brainstormed ideas for a new project
- Shortlisted a potential project concept for upcoming work
- Began outlining the basic structure and scope of the new project

Challenges Faced

- Structuring the jobseeker workflow in a smooth and logical sequence
- Managing workflow design tasks alongside preparation for the final presentation

How the Challenges Were Addressed

- Kept the jobseeker flow minimal and easy to understand
- Focused only on essential steps to meet weekly objectives
- Prioritized presentation tasks while allocating time for planning activities

Plan for Next Week

- Finalize the new project idea
- Prepare a basic structure and roadmap for the upcoming project
